

Otabek

Java & Full-Stack Developer

otabek.dev
github.com/geekuz
t.me/creative_otabek

PROFILE

Software developer building Java systems and full-stack web products. Focused on Spring Boot, React, PostgreSQL, secure application design, automated testing, and learning core engineering concepts by implementing them from first principles.

CORE SKILLS

Backend	Java 21, Spring Boot, Spring Security, REST APIs, JPA/Hibernate, Flyway
Frontend	React 19, Vite, React Router, Tailwind CSS, Vitest, Playwright
Data & platform	PostgreSQL, Docker, Cloudflare R2, Vercel, Render, GitHub Actions

SELECTED ENGINEERING WORK

otabek.dev - Full-stack publishing platform [\[view\]](#)

React and Spring Boot product with Markdown publishing, search, secure session authentication, comments, newsletters, scheduled posts, media management, RSS, sitemap generation, and social previews.

Java HTTP Load Balancer [\[view\]](#)

Framework-free Java 21 load balancer using sockets and the JDK HTTP client, with concurrent forwarding, round-robin scheduling, health checks, failure removal, and recovery.

Build Your Own Sort [\[view\]](#)

Unix-style sorting CLI with multiple hand-built sorting algorithms, standard-input support, deduplication, continuous integration, and a 40-test suite.

Huffman Compression Tool [\[view\]](#)

Java command-line compressor and decompressor implementing Huffman coding, character-frequency analysis, binary round trips, and automated tests.

ENGINEERING APPROACH

- 01 Prefer explicit boundaries, small dependencies, and secure defaults such as HTTP-only sessions, CSRF protection, validation, and rate limiting.
- 02 Verify behavior with component, API, integration, migration, and real-browser checks before production claims.
- 03 Document architecture and trade-offs so systems remain understandable as features grow.
